

Good morning, today's activity is identifying angles. Your task is to label each angle with either: acute, obtuse or a right angle.

Remember: acute is a 'cute' angle (smaller than a right angle), OBTUSE is a 'big' angle (bigger than a right angle) and a right angle is where two lines meet to make 90 degrees (sometimes these angle are drawn as a small square, but not always so don't let it trick you).

Send your work into Class Dojo to earn yourself some Dojo points for your hard work.
