LK: To create a number sequence

Hello everybody! Miss Dattani here, I hope you are all safe and well.

Your task is differentiated two ways:

-Section A is suited for one star (blue and green)

-Section B is suited for two and three star (yellow, orange and red table)

Today you will try and make your own number sequence. A number sequence follows a rule. Look at the example below:

The rule here is to add 10 each time

Use the statements below to make your own sequences:

Section A

- 1) A sequence which starts above 100 and adds 25 each time
- 2) A sequence which has 7 numbers and adds 150 each time
- 3) A sequence which starts above 250, has 7 numbers and adds 75 each time
- 5) A sequence which starts at 500, has 8 numbers and adds 120 each time
- 4) A sequence which starts at 50, subtracts 10 each time, and has 7 numbers

Section B

- 1) A sequence that has 8 numbers, starts above 100 and increases by 150 each time
- 2) A sequence which starts at 0, has 8 numbers and adds 2.5 each time
- 3) A sequence which starts at 2, has 5 numbers and decreases by 10 each time
- 4) A sequence which starts at 1,990, has 6 numbers and adds 1500 each time
- 5) A sequence of your choice which has a difference of 7.5 each time
