LK: To calculate perimeter of shapes

Hello everybody! Miss Dattani here, I hope you are all safe and well.

You do not need a printer to complete any tasks, please do your task on pen and paper and email me if you have any questions at WDV.year5@oasiswoodview.org

Your task is differentiated two ways:

-Section A is suited for one star (blue and green)

-Section B is suited for two and three star (yellow, orange and red table)

Perimeter is the total length of a shape; you can calculate this by adding all of the sides together.

There could be some missing lengths on a shape, which you will have to use your knowledge of the properties of shapes to work out. Below is an example of how to calculate the perimeter.

Remember to use the written method for addition to make sure that your calculations are accurate.

$$15 + 15 + 3 + 3 = 36 \text{ cm}$$

Section A- calculate the perimeter of these shapes

1)

2)

3)

4)

5)

6)

7)

Section B- Calculate the perimeter of these shapes
